SUMMARY

As a former carpenter I pride myself on the things i've built with my own two hands, and I know the value of hard work and teamwork, as no building could be erected without the blood, sweat and tears of many coming together. I look forward to continuing being proud of my creations in the digital world instead.

SKILLS: HTML | JavaScript | CSS | SQL | PostgreSQL | Git | Github | Python | Node | Express.js | Mongoose | React | AWS

RELEVANT EXPERIENCE

Connect 4 | Solo Concept Project

Role *Full app | 5 Day Project*

A browser version of the classic *Connect Four*

- Built a browser game based off the popular game Connect 4
- Created with HTML, CSS and JavaScript
- Was a huge milestone in my JavaScript learning curve

PickFlix | Solo Concept Project

Creator | *Tacoma | 7 Day Project*

A web application to add movie titles you wish to watch

- The brainchild of many nights of being unable to decide what to watch: this browser app helps you decide what movie you watch
- This app was the brainchild of many nights of being unable to decide what to watch
- Built with MongoDB, Express, Node.js, Materialize.
- Deployed on Heroku
- Oauth capabilities to allow users to sign in via google.

Fanime | Group Project

Co-Creator | *Tacoma | 7 Day Project*

A web application to browse a database of over 10,000 anime titles.

- Worked with a team of two other developers to build Fanime
- Utilized a third-party API called Kitsu to build our database.
- Developed the backend that made API calls to the Kitsu API and stored the data in a PostgreSQL database.
- In order for users to be able to favorite anime and add it to their profile page, I developed an algorithm that stores the anime details once an anime has been viewed. This way, our database grows the more the more the site is explored.
- Developed a fully responsive design. Built with Django, Python, PostgreSQL, Materialize, and deployed to Heroku.
- Oauth capabilities to allow users to sign in via google.

LiftaGram | Solo Concept Project
Creator | Tacoma | 7 Day Project

A user based application for posting photos on a feed

- Learned React and built this full CRUD MERN stack app in 7 days
- User-centric delete button, appears only to posts belonging to that user
- “Like” button is user centric, changed color from grey to red
- User-centric app, you can login and signup with your credentials
- Seamless single-page UI creates a frictionless user browsing experience
- Created with HTML, CSS, JS, React, Node.js, Semantic-UI.
